TITLE INDEX

Accurate finite difference approximations for the Neumann condition on a curved boundary 2
A finite element approach for biological fluidized bed modelling 258
A finite element solution of the shallow-water wave equations 20
A finite element technique for tape-head interaction problems in high-speed recording: The steady-state case 661
A generalization of Almansi's theorem and its application 275
A hydrodynamic model for wind-driven and tidal circulation in the Arabian Gulf 410
A layered media model for ray propagation in anisotropic inhomogeneous materials 237
A mathematical model for the calculation of ceramic batch formulas 641
A mixed FE-BE method for coupled vibrations of floating plates of complicated shape 376
A model for compaction of sedimentary basins 506
Analysis of moderately thick restrained circular plates resting on an isotropic elastic half space 352
Analytical, asymptotic and numerical studies of liquid curtains and comparisons with experimental data 170
A new mathematical model for energy transfer problems with radiative boundary conditions 96
Annular liquid jets in zero gravity 630
A note on the equivalence of some two- and three-dimensional models of wind-

driven barotropic flow in shallow seas 553
A parallel algorithm for transonic flow calculations 495
Application of the CVBEM to multiply connected regions 212
Application of the separability assumption on the statistics of linear SDOF systems under squared Gaussain excitation 184
A revised proof of optimality for the cube-per-order index rule for stored item location 87
Asymptotic behavior of solutions of a donor-recipient system 433
BEM of postbuckling analysis of thin plates 544
Colored noise modelling in the reliability evaluation of electric power systems 338
Diffusion of oxygen in a sphere with simultaneous absorption 114
Dynamic response of concrete pavements to moving aircraft 562
Economic tradeoffs in sizing warehouse reserve storage area 381
Evaluation of optimal constant-volume control for irrigation canals 450
Evaluation of the approximate treatment of thin film flows 420
Fluid-elastic instability of in-line tube arrays in cross-flow 518
Fundamental solutions of the axisymmetric Helmholtz-type equations 605
Heating of induction bearings 386
Integration of interim quality status information in discrete-part process control modelling 370
Kinematics of multiple-arm robots with symmetric tasks 427
Knowledge-based support for process planning in a forging environment 140
Magnetohydrodynamic free convection from a disk rotating in a vertical plane 527
Mathematical analysis of a lumped-parameter model for describing the behavior of airborne dust in animal housing 248
Mathematical modelling of Dodge-Romig sampling plans for random incoming quality 264
Microstructural effects on hip joint articulation 312
Modelling and analysis of pneumatic railway brake system 58
Modelling and hierarchical learning control of a dryer 655
Modelling diesel spray evaporation using a noniterative implicit solution scheme 468
Modelling the mushy region in a binary alloy 320
Modelling the transient thermal behavior of the pressure die-casting process with the BEM 394
Models of velocity fluctuations and exactly derivable diffusion laws 549
Multidimensional systems and multirate sampling 132
Non-Darcian mixed convection along a vertical plate embedded in a porous medium 482
Nonlinear spatial dynamics, equilibrium states, and static optimization theory 46
Numerical and experimental analysis of flow around isolated and shielded cubes 588
Numerical calculation of singular integrals appearing in three-dimensional potential flow problems 618
Numerical calculations of aerial dispersion from elevated sources 459
Numerical calculations of two-phase flow in a liquid bath with bottom gas injection: The central plume 67
Numerical modelling of flow of immiscible fluids in subsurface reservoirs using a self-adapting mesh 282
Numerical stability study of finite difference schemes for the resolution of three-dimensional time-dependent Navier-Stokes equations 14
Numerical study of the motion of a string vibrating against an obstacle by physical discretization 489
One-dimensional hydrodynamic model of a tidal estuary for optimal control 36
Optimal control of the southern pine beetle (SPB) infestation 155
Optimum response design guides for electrohydraulic cylinder control systems 598
Power absorption by thin wave energy devices 327
Response of shear flow turbulence to diffusional electromagnetic fluctuations 226
Solution of potential problems using combinations of the regular and derivative boundary integral equations 536
Solution of the transonic integrodifferential equation using a decay function 30
Some mathematical modelling problems of seismic response of structures 475
Stability analysis of Eulerian-Lagrangian methods for the one-dimensional shallow-water equations 122
Stationarity and stochastic differential equations 649
The compromise inherent in structural feedback control 362
The CVBEM for multiply connected domains using a linear trial function 104
The microwave heating of frozen substances 439
The temperature distribution influenced by moisture and vapor pressure in a multilayered composite wall 296
Time-dependent batch settling of flocculated suspensions 77
Two-dimensional digital filters 304
Two-equation thermodynamical model for turbulent buoyant flows. Part II: Numerical experiments 576
Two-stage suboptimal discrete-time regulators for continuous-time stiff dynamic systems 199
Using branch-and-bound to solve bi-level geometric programming problems: A new optimization model 271

KEYWORDS INDEX

absorption 114
Almansi's theorem 275
analytic functions 104
anisotropic 237
annular jets 630
annular liquid jets 170
articulation 312
artificial compressibility method 14
asymptotic methods 170
atmospheric pollution 459
automation of canals 450
average outgoing quality 264
axisymmetric problem 605

batch formula 641
biharmonic axisymmetric functions 275
bi-level programming 271
binary alloy 320
biological fluidized bed 258
bistability 433
bluff body 588
bottom stress 553
boundary element 394
boundary element method 212, 536, 544, 605, 618
boundary element methods 104
boundary elements 30
boundary layer 420
boundary value problems 104
branch-and-bound 271
B-splines 527
buoyancy driven flow 576

carrying capacity 433
cauchy integral equation 104
ceramic 641
CFD 588
chemical reactors 170
coexistence 433
colored noise 338
compaction of porous media 506
competing donors 433
composite wall 296
compressible fluids 661
concrete pavement 562
conduction/radiation 96
consolidation 77
constant-volume control 450
control 132
coordinated robots 427
coupled energy transfer 96
coupled vibration 376
cross-flow 518
cube per order index 87
curved boundary 2
CVBEM 212

dead biomass 433
decay function 30
decoupling algorithm 20

derivative boundary integral equation 536
diesel spray 468
diffusion 549
diffusion of oxygen 114
diffusive force 67
discrete optimal control 450
dispersed plug flow 258
domain partitioning 495
dominance 433
double sampling 264
drying furnace 655
dynamic equilibrium states 46
dynamic programming 155
dynamic response statistics 184
dynamics 362
dynamic system models 338

electromagnetic field 386
empirical formula 641
end-effector 427
energy studies 36
enthalpy method 439
Eulerian-Lagrangian method 122
evaporation 468
experimental data 170
expert system 140
explicit method 2
extinction 433

feedback control 362
film flow 420
filters 304
finite difference method 14, 576
finite differences 2
finite element 282
finite element method 258
finite elements 20, 661
fixed film reactors 258
floating plate 376
flow 282
flow induced vibrations 518
fluid-elastic instability 518
fluid power 598
fluid-structure interaction 661
forging 140
Fredholm integral equation 536
friction factor 553
fundamental solution 605

Galerkin 527
Galerkin's residual method 258
gas dispersion 459
gas injection 67
geometric programming 46, 271
gravitational settling 248

heat exchanger 518
heat transfer 386, 506
Helmholtz-type equation 605
hip joint 312
hydrodynamic models 553
hydrodynamics of the Arabian Gulf 410
hypersingular integral 536

immiscible 282
